Purpose

The primary purpose of this project is to:

- Help users visualize and comprehend electric vehicle charge and range data.

- Demonstrate the application of data analytics in the automotive sector.

- Provide a web-accessible dashboard that allows stakeholders to interact with the data.

- Support data-driven decisions in the field of EV adoption, infrastructure, and market analysis.

This project serves as an educational and practical demonstration of how multiple technologies—like Tableau, web development, and cloud data integration—can be combined to solve real-world analytical problems.
